DROPOUT RATE IN VOCATIONAL EDUCATION TRAINING

Outcome indicator

Indicator Phrasing

English: % of trainees who enrolled but did not complete [specify the VET program]

French: % d'étudiants inscrits mais qui n'ont pas achevé [précisez le programme d'EFP]

Portuguese: % de formandos que se matricularam mas não concluíram [especifique o programa FEV]

Czech: % studentů, kteří se přihlásili a nedokončili [doplňte název programu odborného vzdělávání]

What is its purpose?

The indicator assesses the percentage of participants who were enrolled in a given vocational education training (VET) program at a given time period and did not complete the training.

How to Collect and Analyse the Required Data

1) **Review VET institutions' documentation** related to training enrolment, attendance and repetition to determine how many students have officially or unofficially stopped attending the training.

2) To **calculate the indicator's value,** divide the number of students who did not complete the training by the number of students who enrolled in the training. Multiply the result by 100 to convert it to a percentage.

Disaggregate by

Consider [disaggregating](#) the data by the training type, trainees' gender or according to a specific group of students (for example, students with disabilities).

Important Comments

1) If possible, it may also be useful to **track the main reasons for dropping out**, i.e. dropout rates by reason for dropping out.
